TO WHOM IT MAY CONCERN

In 2004, John Holland Group was awarded the contract to construct a water treatment plant and pump station at the 'Head of the Road' plant located at Melbourne Water Western Treatment Plant.

Due to a drought relief agreement being established with the local farming community, it was necessary that the project be carried out on a 'fast track' basis. To ensure a successful outcome John Holland required suppliers with a solid reputation for supplying quality manufactured goods within tight time constraints.

Agfab Engineering was awarded the contract to manufacture the required inlet and discharge pump manifolds, as well as the fabrication of special in-line pipe spools and fittings for the project. Our requirements and needs were understood by Agfab's management who worked closely with our site management team to ensure the construction program and quality were not compromised.

The customer focused approach as well as the high quality products and services provided by Agfab has given our management team confidence to consider Agfab Engineering for major project work on numerous John Holland project sites since.

Yours sincerely
JOHN HOLLAND PTY LTD
