To Whom it May Concern

Agfab Testimonial

The Mitchell Group was awarded the 1st stage of the Wimmera Mallee Pipeline from Lake Bellfield at Halls Gap Victoria through to Taylors Lake a distance of approximately 70 kilometres. This project involved the laying of a 1016mm diameter MSCL pipeline, construction of pumping stations and connecting onto the outlet structure of the reservoir.

Agfab Engineering was contracted to supply approximately 130 No. lobster back bends, branches and manifolds for this stage of the project. The construction program was tightly managed and the procurement and supply of goods to site were required to meet set dates. Agfab progressively met these dates and even changed their fabrication program to suit our changing site requirements.

In some instances and at the last minute, changes had to be made to the fabrication program to suit the site construction program. To the credit of Agfab's staff and their customer focused approach, we where able to make these changes and still have the goods ready for transportation when we required them.

The quality of the products and services supplied were of a high standard even when under extreme pressure to deliver the goods on time. In the initial stages of the project as well as during the works our client representative audited Agfab's quality system with no issues being raised.

I have no concerns in recommending the Agfab team to undertake this type of works. Agfab has proven to be a excellent subcontractor that can be relied upon to produce high quality fabrication works in a timely and cost effective manner.

Yours Faithfully,
Mitchell Water Australia Pty Ltd

Lee Briggs
